Male Hormone Survey

Rate the following list of symptoms using the following key:

Symptoms of Low Testosterone

- _____ Blunted motivation and drive
- _____ Diminished feeling of well being
- _____ Diminished sex drive (decreased libido)
- _____ Sexual dysfunction (weak erections, fewer erections)
- _____ Reduced muscle mass and strength
- _____ Reduction in testicular size
- _____ Reduction in the amount of semen
- _____ Fatigue or decreased energy
- _____ Increased body fat, weight gain
- _____ Diminished mood – irritability, depression, lack of focus
- _____ Decreased bone strength (osteopenia, osteoporosis)
- _____ Loss of body hair
- _____ Less overall beard growth
- _____ General aches and pains
- _____ Sleep disturbances
- _____ Hot flashes, sweats

Upon completion of your survey, discuss your current symptoms with your health care provider as the use of Hormone Replacement Therapy is a personalized decision based upon benefits and potential associated.
